

Sometimes I have code lying around that another developer can use. I like to help out other people. It's very rewarding.

— Ed Keim

Ed Keim and his wife live in Breckenridge, Colorado, and spend as much time as possible on the slopes. “I’m a ski bum at heart,” says Ed. “For me, it all boils down to skiing and computers.” For Ed’s wife, quilting is a close second – she’s even invented a swatch keeper to keep her quilting swatches organized. When people began clamoring for it, Ed put his developer skills to work.

Pay as you go

He created an online store (www.jkquilting.com) to sell his wife’s innovation – along with other quilting products. It didn’t take long for Ed to make his way to PayPal. “PayPal has a lot to offer,” he says. “I like the fact that you pay for the services you use. Other companies require you to pay a set amount every month, whether you have a sale or not.”

PayPal has a lot to offer. I like the fact that you pay for the services you use.

Sharing knowledge

Ed stumbled across the PayPal Developer Community one day when he had some questions about coding. Not only did he get answers to his questions, but he realized he had knowledge to share. Ed started posting regularly and earned the distinction of ACE Developer. As for what keeps him coming back to the Developer Community, Ed explains, “It’s a good place for exchanging knowledge – someone always has a new trick. And sometimes I have code lying around that another developer can use. I like to help out other people. It’s very rewarding.”
